

## Pricing Plans:

### Customized Website -- \$500

- A simple transaction that covers the development and implementation of the website.
- I will walk you through the domain transfer/purchase. The domain must be charged to your card/account.
- You will take full responsibility for the website and domain after this transaction. Unless I have done you a disservice, all further work will be charged separately.

### Customized Website and Editing Coverage -- \$500 + \$35 recurring monthly payment

- This transaction covers the development and implementation of the website. Additionally, you are given 3 free-of-charge editing requests per month. The number of free-of-charge editing requests resets at the end of each month.
- If you only use 1 request a month, no worries! You'd still be saving \$15. On the other hand, assuming you use all 3 requests each month, you'd be saving \$115/month.
- I will walk you through the domain transfer/purchase. The domain must be charged to your card/account.
- You will take full responsibility for the website and domain after this transaction. Unless I have done you a disservice, all further work will be charged separately.

### Customized Website and Domain Coverage -- \$500 + \$25 recurring monthly payment

- This transaction covers the development and implementation of the website.
- I will complete the domain transfer/purchase entirely. You won't lift a finger. I take complete responsibility over the domain.
- You will take full responsibility for the website after this transaction. Unless I have done you a disservice, all further work will be charged separately.
- **Why's this so expensive?**
  - By purchasing a domain for your business, I am placing myself under unnecessary financial stress. Because domains are bought on annual payments, I am burdened with upholding this and knowing when to terminate it. This liability is not something I am willing to take without enough

compensation to make it reasonably worth the stress. I am offering this service to those who truly want nothing to do with the technology and simply want a working, effective website.

**Customized Website Premium: Domain and Editing Coverage -- \$500 + \$50 recurring monthly payment**

- A bundle of all 3 plans into the ultimate package. You save \$5/month on each coverage.

**Editing Requests -- \$50 per request**

- If you would like an adjustment made to your website following the initial purchase you must pay this fee per edit.
- Example requests I will fulfill:
  - Update this photo to (BLANK); change this text to say (BLANK); remove the “help wanted” banner; change the background color to (BLANK). A good rule of thumb is if you’re changing something that already exists it can be requested. That being said, simple additions like creating a “help wanted” banner are completely fine.
- Example requests I will NOT fulfill:
  - Create a purchasing interface where customers can place orders online; when a customer fills out a form on the website, have a follow-up email sent to them instantly; add a chatbot feature to help customers navigate the website. A good rule of thumb is if you’re adding something that has moving parts it cannot be requested. Rather, requests of this magnitude would fall into the *Workflow Optimization/Advanced Website Properties* addon.

**Addon: Workflow Optimization/Advanced Website Properties -- \$100 to \$2,500**

- **What does workflow optimization actually mean and how can it benefit my business?**
  - Workflow optimization, in the digital world, means connecting all of your moving parts together. Let’s say a customer fills out an inquiry form on your website. Who does it instantly go to? Who is sending a follow-up email? Who is booking the job? Who is placing that job in the calendar? If you’re an

efficient business, none of those questions should be answered with a person's name. With the technology of today, every step listed can be automated. And I have the capability to write the scripts that make that magic happen.

- **What's with the price range?**

- To ensure fair pricing for these services, I have given them a range instead of a fixed number.
- Workflow optimization prices will be found with the following formula:
  - $(\text{time saved in hours per transaction} \times \text{daily bookings} \times 365 \times \text{hourly rate}) \times 50\%$
- Assuming your business saves just 1 minute of time per customer, you average 15 bookings per day, and your bookkeeper is paid \$30/hour, you would be saving \$5,475 a year (after the first year). While the formula suggests you should be charged \$2737.50, I am maintaining a ceiling price of \$2,500.
- Advanced website properties are up to my discretion. It depends on how much research and effort goes into producing the final product.
